

Asset Health Monitoring Solution SRP700 Rockwell Edition

Streamline your plant operation by benefitting from data from the field

Benefits:

- Take actions on diagnostic data provided by devices.
- Connect with a fingertip to the device for troubleshooting and configuration.
- See current and past diagnostic data as well as prescription measures together with their time stamps.
- Analyze historical device diagnostic data.
- Perform Heartbeat device verifications.

Field of application: Devices often report maintenance required months before they fail. In a lot of cases, such information is not collected or is lost in logfiles of the control system, where maintenance technicians do not have access. Our Asset Health Monitoring solution accesses this information and presents it in easily readable form to all involved in the running of a plant. This not only improves transparency, but also reduces maintenance costs while increasing plant availability.
