

Digital extension cable CYK11

Extension cable for all sensors based on Memosens

More information and current pricing:

www.apsc.endress.com/CYK11

Benefits:

- High process safety through water-proof connection: No contact corrosion when installed correctly.
- Increased availability of the measuring point: Digital data transmission provides an automatic error message if the signal is lost.
- More flexibility in plant planning and installation: Cable length up to 85 m is possible.
- Individual adaptation to your measuring point: Various combinations of ferrules, M12 connectors or M12 plugs available.

Field of application: CYK11 is the easy way to extend your Memosens measuring points. Use it for Memosens sensors with plug-in head and the CYK10 cable or for fixed cable sensors with Memosens technology. In combination with the optional junction box, CYK11 guarantees safe and reliable signal transmission even in harsh environments.

Features and specifications

Analyser

Measuring
principle
UV photometric

Conductivity

Measuring principle
Potentiometric

Turbidity

Measuring principle
Four beam alternating light

Sludge Level

Measuring principle
Ultrasonic sensor

ORP / Redox

Measuring principle
Sensor ORP / Redox

Disinfection

Measuring principle
Free chlorine

Oxygen

Measuring principle
Amperometric oxygen measurement
