

Netilion Smart System for Surface Water

Package of smart sensors that measure the surface water quality in lakes or rivers

Benefits:

- Intelligent and easy supervision of surface water quality, ensure good water quality in lakes or rivers.
- Sensors for relevant parameters, such as dissolved oxygen, pH, conductivity and temperature.
- Direct access to measuring values and diagnostics via smartphone app.
- Safe storage of measuring data in the certified Endress+Hauser Cloud.
- Use clever functionalities of the Smart Systems App, such as location of measuring spots on a map, graphical evaluation, alarms and notifications, information on the sensor status in case service is needed.
- For using the Netilion Smart System it is necessary to register online and choose a plan. The **costs of the desired plan** depend on the rate of data transmission and is additional to the sensor package price

Field of application: The Netilion Smart System for Surface Water makes it possible to monitor the water quality in lakes or rivers. The package consists of smart sensors and connectivity to communicate the water quality parameters to the user. The user receives all information on his smartphone after installing the Smart Systems App. This way the user can then remotely analyze the water quality and take action to protect the respective river or lake if necessary. **Please note:** The use of the app requires a plan.
