

# Conductive Point level detection One rod probe 11961Z

High resistance point level detection of  
conductive liquids steam boilers and  
aggressive media

## Lợi ích:

- Safe and reliable measurement even in aggressive medium thanks to corrosion-resistant materials for rod and insulation
- Can be used in steam boilers thanks to ceramic insulation resistant to steam and hot water
- Can be deployed particularly with high pressure or vacuum
- Probe can be shortened as required

## Tổng quan về thông số kỹ thuật

- **Process temperature** -200 °C ... 250 °C (-328 °F ... 482 °F)
- **Process pressure / max. overpressure limit** Vacuum ... 160 bar (Vacuum ... 2320 psi)
- **Min. conductivity of medium** 20 µS/cm

**Phạm vi ứng dụng:** The 11961Z is a highly resistant probe for applications with aggressive medium thanks to corrosion-resistant materials for rod and insulation. It can be used in steam boilers thanks to ceramic insulation resistant to steam and hot water.

## Tín năng và thông số kỹ thuật

Point Level / Liquids

Measuring principle

Conductive

**Point Level / Liquids****Characteristic / Application**

One rod probe for high and extremely low temperature and high pressure. Corrosion resistant
