

ERP integration software IMS Middleware SXS70

Integration of data from inventory management software packages into ERP

Benefits:

- Faster and more efficient decision making based on the right information at the right place
- Out of the box connectivity to and from the inventory management solutions landscape of products
- Error handling mechanisms ensure that the valuable data does not get lost in the process
- Delivers standard IT web-service-based connectors that allows a transparent communication between customer's ERP system and the inventory management solutions product landscape

Field of application: The flexible and open IMS Middleware SXS70 enables the integration of data from our inventory management software Tankvision, SupplyCare and Terminalvision into leading business systems. With four different workflow modules it can integrate data from all typical inventory management processes and support the automation and optimization of business processes.
