

Float switch Liquifloat FTS20

For point level detection in liquids

Benefits:

- Reliable and cost-effective point level detection in liquids
- Highest product and measurement safety due to different cable and sensor materials for different media
- Electrical connections to NAMUR for hazardous areas (to Zone 1) or change-over contact (AC/DC) for universal standard application
- Small diameter for simple installing using tapped hole G 1 A

Field of application: The Float switch FTS20 is a simple and cost-effective solution for point level detection in appropriate fluids. It is used in tanks and vessels as a pump protector or level alarm in open basins, e. g. in sewerage treatment plants. The float switch has two output options, a NAMUR switching signal or a change-over contact.
