

ReadWin 2000

PC Software

Device parameterization and online visualization

Benefits:

- Easily set up units from the PC
- Display signal sequences
- Electronically archive measurement points
- Export pre-analyzed values into other programs (e.g. MS® Excel)
- Use modem connections to distant units

Field of application: ReadWin 2000 is a PC software for device configuration, central data management and visualization of stored data. Supported device could be configured and parameter set can be stored. Stored data from data managers can be read out and tamper proof archived. Archived data can be printed and exported. Users can install and use the software without any restrictions.
